

Design a Ruler

Introduction

For this project you require a blank plastic ruler with an insert size of 155 x 29mm. See the Kershaw Kids website for details of where to obtain these rulers.

Note: the template for this project is twice the size of the ruler insert; this is to optimize the work area. Before buying a ruler, check that the technique below produces a rectangle of the correct size on your computer.

Method

1. Open the template for this project.
2. If the template appears with scroll bars, then double click on its title bar to make sure that the whole rectangle is visible.
3. Decorate the rectangle. You can use colour magic's stamps or import your own images and photographs. Try not to remove the borders of the rectangle.
4. Resize your design:
Click on **Image** on the main menu, followed by **Resize**.
Enter a width of **582** pixels. The height should adjust to **108** pixels.
5. Print your design.
6. Cut out your design.
7. Place your design in the ruler and snap the cover into place.
